An active site serime residue characteristic of serime proteases is present, along with 2 cysteine residues which may be important in forming the catalytic domain. A gene encoding the protein may be inserted in a vector and expressed in recombinant host cells, for use as a recombinant vaccine. The protein may also be used in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protease and a C-terminal helper domain), which is transported to the periplasm, followed by insertion of the C-terminal beta-domain into the outer membrane, possibly forming a pore, and export of the N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence represents a Haemophilus influenzae adhesion and penetration protein, encoded by the hap gene. The protein is first synthesised as a preprotein with 3 functional domains (the N-terminal signal peptide, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Haemophilus adhesion and penetration protein and corresponding DNA - used to produce vaccines against H. influenzae infection.

맒 S 8 B Ş Дb Ş 닭 Ś Ş 밁 8 片 Matches 1394; Query Match Best Local : expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09359-ADA09393), and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a vaccine for prophylactic or therapeutic treatment of an H. influenzae infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies may be used to diagnose the presence of H. influenzae infection in a sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The detailed above, an expression vector comprising transcriptional and translation regulatory nucleic acid operably linked to the HAP nucleic acid, producing HAP) by culturing a host cell transformed with the The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09349, ADA09352 and ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09355 and ADA09357. Also included are a recombinant nucleic acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus Geme Sequence 1394 AA; Example 1; Fig 6; 149pp; English. Geme JWS; WPI; 2003-567308/53. New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization. Claim 2; Fig 11; 149pp; English. The invention retelace to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09349, ADA09351, ADA09352 and ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09354 encoded by a nucleic acid appearing sa ADA09349, ADA09351, ADA09354 encoded by a nucleic acid appearing the remarkation regulatory nucleic acid appearing transcriptional and translation regulatory nucleic acid expression vector comprising transcriptional and translation regulatory nucleic acid perstably linked to the HAP nucleic acid that will hybridize under scringency conditions to the nucleic acid that will hybridize under scringency conditions to the producing the expression vector comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administraing the composition comprising an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a sandle or partient, in passive immunisation treatments, and to purify or separate HAP proteins or the HAP protein from a semple. The present sequence is the HAP protein from a strain of H. influenzae. Sequence 1395 AA;	ID ADA09348 ID ADA09348 standard; protein; 1395 AA. XX AC ADA09348; XX XX DT 06-NOV-2003 (first entry) XX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                 composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09359.) and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a vaccine for prophylactic or therapeutic treatment of an H. influenzae
                                                                                                                                                                                                                                                                                                                               The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09348, ADA09350, ADA09351, ADA09351, ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351,
                                                                                                                                                                                                                                                                                                                                                                                                                                  New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB;
                 infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies may be used to diagnose the presence of H. influenzae infection in a sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The present sequence is the HAP protein from a strain of H. influenzae.
                                                                                                                                                                                                         expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the
                                                                                                                                                                                                                                      detailed above, an expression vector comprising transcriptional and translation regulatory nucleic acid operably linked to the HAP nucleic acid, producing HAP) by culturing a host cell transformed with the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09350, ADA09352 and ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09353, ADA09355 and ADA09357. Also included are a recombinant nucleic acid that will hybridize under stringency conditions to the nucleic acid detailed above, an expression vector comprising transcriptional and
                                                                                                                                                    New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Haemophilus influenzae; strain 1396B

                                                                                                                                                                                                                                   expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09359-ADA09393), and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a vaccine for prophylactic or therapeutic treatment of an H. influenzae
                                                      sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The present sequence is the HAP protein from a strain of H. influenzae.
                                                                                                                                               infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antik may be used to diagnose the presence of H. influenzae infection in
                                                                                                                                                                                                                                                                                                                                                                                                                                                            translation regulatory nucleic acid operably linked to the HAP nucleic acid , producing HAP) by culturing a host cell transformed with the
Sequence 1411 AA;
                                                                                                                                                                                         The antibodies

expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09359-ADA09393), and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a vaccine for prophylactic or therapeutic treatment of an H. influenzae infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies patient, and in generating antibodies to the HAP protein. The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09345, ADA09352 and ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09353, ADA09355 and ADA09357. Also included are a recombinant nucleic ADA09353, ADA09355 and ADA09357. Also included are a recombinant acid that will hybridize under stringency conditions to the nucleic acid conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency acid that whill hybridize under stringency acid that whill hybridize under stringency acid that whill hybridize under detailed above, an expression vector comprising transcriptional and translation regulatory nucleic acid operably linked to the HAP nucleic acid, producing HAP) by culturing a host cell transformed with the New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization. N-PSDB; ADA09353 WPI; 2003-567308/53 2; Fig 21; 149pp; English

Query Match Best Local (Sequence 1436 AA; 79.8%; Score 5807; 79.3%; Pred. No. 0; DB 6; Length 1436;

may be used to diagnose the presence of H. influenzae infection in a sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The

present sequence is the HAP protein from a strain of H. influenzae.

New recombinant Haemophilus adhesicn and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization.

Example 2; Fig 23; 149pp; English.

The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09350, ADA09352 and ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, CADA09355, ADA09355 and ADA09353, ADA09355 and ADA09357. Also included are a recombinant nucleic capabols, and ADA09357, Also included are a recombinant nucleic comparish that will hybridize under stringency conditions to the nucleic acid detailed above, an expression vector comprising transcriptional and comparish producing the producing transcriptional and comparish producing the producing a partial producing a producing a host cell transformed with the cexpression vector, a composition comprising a pharmaceutical carrier and CC HAP, inducing an immune response in a patient by administering the CC composition, a composition comprising an antibody capable of binding to CC HAP (or to a peptide selected from 35 peptide sequences appearing as CC ADA09359-DAD09393), and an antibody capable of binding to the peptides. CC The Haemophilus adhesion and penetration (HAP) protein is useful as a CC vaccine for prophylactic or therapeutic treatment of an H. influenzae constitution (e.g. influenza), in generating an immune response in a CC sample or patient, in passive immunisation treatments, and to purify or comparate HAP proteins or the H. influenzae organism from a sample. The CC separate HAP proteins or the HAP protein from a strain of H. influenzae.

                               ce expression vector, a composition composition a patient by administering the CC (composition, a composition comprising a pharmaceutical carrier and composition, a composition comprising an antibody capable of binding to CC (composition, a composition comprising an antibody capable of binding to CC (chap (or to a peptide selected from 35 peptide sequences appearing as a CC (the Haemophilus adhesion and penetration (HAP) protein is useful as a CC vaccine for prophylactic or therapeutic treatment of an H. influenzae (CC patient, and in generating antibodies to the HAP protein. The antibodies compared the proteins or the presence of H. influenzae infection in a CC sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The CC present sequence is the HAP protein from a strain of H. influenzae.
                                                                                                                                                                                                                                                                                                               The invention relates to a new recombinant Haemophilus adhesion and penetration protein (EAP) appearing as ADA09348, ADA09352 and ADA09354 and Encoded by a nucleic acid appearing as ADA09349, ADA09351. ADA09353, ADA09355 and ADA09357. Also included are a recombinant nucleic acid that will hybridize under stringency conditions to the nucleic acid that will hybridize under stringency conditions to the nucleic acid detailed above, an expression vector comprising transcriptional and translation regulatory nucleic acid operably linked to the HAP nucleic acid, producing HAP) by culturing a host cell transformed with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Haemophilus adherence and penetration protein; HAP; antibacterial; immunostimulant; vaccine; Haemophilus influenza infection; influenza.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Haemophilus HAP protein from strain TN106.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   06-NOV-2003

BLITRA PHARM

New isolate antisense nucleic acids, useful for identifying proteins or screening homologous nucleic acids required for cellular proliferation to candidate molecules for rational grag discovery programs

Claim 25; SEQ ID NO 65711; 1766pp; English.

nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense invention relates to an isolated nucleic acid comprising any one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a programism acts; (9) manufacturing an antibiotic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1449 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                      CC The present invention describes the full length genome of Neisseria CC meningitidis B (NMB). The sequences in AAF21544 and AAF21607 to AAF21613 CC represent fragments of the NMB genomic sequence, as the sequence was too CC long to go in a record on its own it was split into 8 sequences which CC overlap each other at the beginning and end of each sequence by 49980 bp (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of CC AAF21607, the last 49980 bp of AAF21549 are repeated at the beginning of CC AAF21607, the last 49980 bp of AAF21507 are repeated at the beginning of CC CC PC AAF21608, and so on). AAF21545 to AAF21588 encode the Neisseria proteins CC given in AAF25550 to AAF21593, and AAF21589 to AAF21566 represent PCR CC primers which are used in the exemplification of the present invention. CC primers which are used in the exemplification of the present invention. CC primers which are used in the exemplification of the present inventions be used in vaccines and gene therapy. Neisserial activity; and can be used in vaccines and gene therapy. Neisseria be used in compositions CC and/or antibodies which binds to the proteins can be used in compositions CC and/or antibodies maised to Neisserial bacteria or as a CC diagnostic reagent for detecting the presence of Neisserial bacteria or as a composition of the proteins can be used in a carrier to the proteins can be used in a carrier to composition of the proteins can be used in compositions and compositions of antibodies raised to Neisserial bacteria. Computer memory, the proteins can be used in a carrier to composition of the proteins can be used in a carrier to composition of the proteins can be used in a carrier to composition of the proteins can be used in compositions of the proteins can be used in a carrier to composition of the proteins can be used in a carrier to composition of the proteins can be used in a carrier to composition of the proteins can be used in compositions of the proteins can be used in compositions of the proteins can be
